Mega Boat Shed Curtain

Fabric: Monotec from Pro Knit Industries Pty Ltd. from Pro Range Wholesale

The builders of a large marina development complex, including a substantial boat shed, commissioned CP Solutions / CP House to develop a blind/curtain system that would provide solar and wind/dust protection for the boat shed's interior. The client specified that the solution must be able to track upward toward the central apex and then down the other side and vice versa. Moreover, the clearance height of the shed was not to be impeded by the solution CP Solutions / CP House installed. This was to ensure that large yachts and their masts could be easily accommodated. The company produced a single Monotec mesh curtain with vertical seatbelt webbing. This solution hit the mark with the client. It not only is aesthetically pleasing, it has proven to deliver excellent service. The project was a "ground up" design with custom components, fixing and installation methodologies specifically aligned to delivering a product tailored to the client's needs.
